

Heason Capabilities

MOTION CONTROL

Experts in the motion control field, Heason can provide a wide range of products and technologies for every application.

ACTUATORS

A cleaner and more efficient alternative to hydraulic and pneumatic solutions for manufacturing and industrial applications.

LINEAR POSITION

A wide range of linear positioning devices for motion control applications.

MOTORS

A tremendously wide variety of different size and package types with compatible servo and stepper drives available.

GEARBOXES

A wide range of gearboxes including planetary, zerobacklash and worm gears for a diverse range of applications and industries.

SLIP RINGS

Diverse and reliable slip rings, otherwise known as rotary electrical joints, collector rings or electrical swivels.

SERVO DRIVES

Versatile range with advanced control technology, control interfaces and multiple Fieldbus technology.

PRECISION SCREWS

Ball screws, lead screws, glide screws, trapezoidal screws and ball splines.

BESPOKE SOLUTIONS

Using our own extensive design and manufacturing capability we can provide custom solutions for any application.

AND MORE...

We provide specialist motion engineering consultancy, design & manufacturing services across a wide range of market sectors
As well as the components, most of our business comes from engineering these products into customised motion control solutions.
